

PUNTO 11.

$$T(n) = \begin{cases} \alpha e_1 & n=1 \\ T(n-1) + \alpha e_2 & n > 1 \end{cases}$$

suponiendo que $n > 1$

paso ①

$$T(n-1) + \alpha e_2$$

paso ②

$$[T(n-2) + \alpha e_2] + \alpha e_2$$

$$T(n-2) + 2\alpha e_2$$

paso ③

$$[T(n-3) + 2\alpha e_2] + \alpha e_2 =$$

$$= T(n-3) + 3\alpha e_2$$

paso i

$$= T(n-i) + i \cdot \alpha e_2$$

caso base

$$n - i = 1$$

$$n = 1 + i$$

$$\boxed{n - 1 = i}$$

reemplazo i

$$+ (n - (n - 1)) + (n - 1) \cdot c_{e2} =$$

$$= T(1) + (n - 1) \cdot c_{e2} =$$

$$= \boxed{c_{e1} + n c_{e2} - c_{e2}} = T(n)$$
